

It gave me immense pleasure that I have participated as the main speaker & reviewer in The 1st Physics and Technologies in Medicine and Dentistry Symposium (PTMDS) was hosted and supported by the Research and Innovation Product Management Office, Universitas Indonesia. The aim of this event was to increase the research publication of the Universitas Indonesia and to establish research networking. The event held on July 15th-16th, 2017 at the Margo Hotel, Depok, Indonesia. The PTMDS, with honor, collaborates with Asian Journal of Pharmaceutical and Clinical Research (ISSN0974-2441), which are indexed in Scopus. This event is supported by the Directorate of Research and Community Engagement Universitas. After my presentation one separate meeting of held Focus group discussions for formulating strategies for increasing quality of the journals on special invitation. I have given presentation on topic **'Research, Networking & Drug Discovery'** which was mainly on why research is necessary, How we do it, quality of research and why networking is important and finally concluded with drug discovery and computer aided drug design. I have seen the curriculum of the university of Indonesia and it was very attractive to me. It has a very good composition in their academics at UG level are that 40 % class teaching ie instruction and 40% research and 20% community services. Every student has to do research mainly on their local subjects and problems. Student gets a degree when their research published in scopus indexed journal. They do conferences regularly and have a good facility to do research. I am very Thankful for the Universitas Indonesia for inviting me and specially to the Dr. Diah Ayu Maharani, Dr. Yuniardini and Dr. Linda Kusdhany, Ms. Ninis and organizing committee, Chancellor of University for inviting me in such intellectual grand even as a speaker.
